

How to Get Pictures from Your Camera onto Your Computer

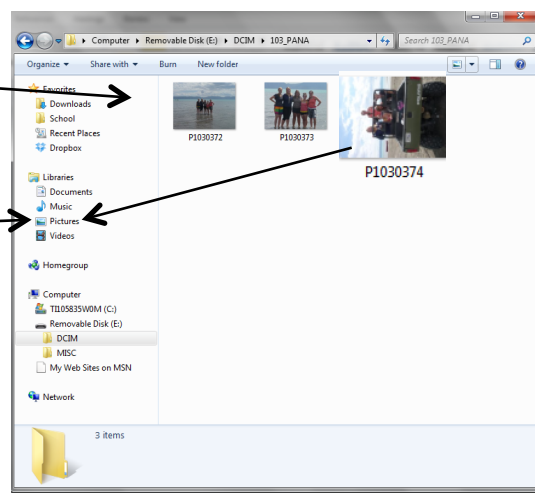

1. Make sure the picture you want is showing up on the digital camera.
 - a. If you have a hard copy of the picture you can take a picture of the picture.
2. Plug the camera in using the camera cord.
3. Make sure your camera is turn on.
4. Depending on your camera you might have to accept the camera being hooked up to the computer.
5. A screen like the picture to the right should pop up.
6. Click on the button that says “open folder to view file”.

7. Depending on your camera, something like the below picture will show up.

8. Click on the folder for the camera. Mine is the DCIM.
9. You should now be able to see all the pictures you have on your camera.

10. To save the picture you would like to use we are going to use a drag and drop.
11. Decide where you would like to have the picture.
 - a. I will save it in my pictures folder.
12. Once you have decided and can see the folder on the left hand side, left click the picture you would like and don't let go.
13. That will add the picture to that folder.
 - a. Note: it will still show up in your camera folder and on your camera until you delete it from there.
